

## Superstore Chain Logistics Report

Source of the data : <https://tinyurl.com/yd65vnf3> (PowerBI Sample superstore data 2017-2020)

- **My report contains the visualization of key performance indicators such as Region, states, categories, segments and no of orders of the superstore chain to show the stakeholders about their importance.**
- **To make the visualizations interactive, I made the buttons to redirect to the table, maps, key-influencers and for filtering, I added slicers, decomposition tree, matrix table.**
- **To efficiently compare the monthly sales, I added area chart. To show the state-wise sales variations interactively, I added map with bubble size as sum of sales and tool-tip as no of orders.**
- **I used synced slicers in Dashboard and Table report to update the both pages in sync.**
- **To compare the sales among categories, Pie chart was efficient which shows percentage of each category visually as well as statistically.**
- **I found that the office supplies had most number of orders and California and New York had the most number of orders and sales. Also the 2020 had the greatest sales in all of the four years.**
- **I also found that category Office supplies had the lowest average profit among three and Technology had the highest average profit.**
- **Sub-category art and fasteners had the lowest profit among all the sub-categories and sub-category tables had the highest average profit among all.**
